Introduction

I am an undergraduate at University of Toronto specializing in Statistics, Machine Learning & Data Science, and Quantitative Finance. Currently, I am an IT QA Assistant at Ontario Public Service, supporting software quality through test planning and validation. I am proficient in Python, Java, C, HTML, CSS, JavaScript, and R-code, with a strong foundation in calculus, linear algebra, probability, statistics, and regression modeling. Moreover, I am collaborating with Arizona State University on research into the application of large language models

Education & Work Experience

University of Toronto, BS in Statistics Machine Learning and Data Science & Quantitative Finance Sept 2023 – Current

- GPA: 3.7/4.0

Ontario Public Service, IT QA Assistant Sept 2025 – Current

- Work: Testing Ontario education application website by selenium and develop the environment for testing website SnapQA (QA tools). Using share point and pipeline to debug and do automatic testing.

Skills

Programming Languages: Python, Java, HTML , C, R-code

Mathematical Skills: Calculus, Linear Algebra, Regression model, Probability, Statistics

Finance Skills: Financial Modeling, Data Analysis, Risk Management

Tools: Power BI, Android Studio, Office 365 software suites, Excel, Word, Outlook, Git, PowerPoint, Canvas

Soft Skills: Adapt to new learning opportunities, Attention to detail, Work cooperatively, Problem-Solving, Effective writing and presentation, Analytical Thinking, Time Management, Communication, Leadership

Project Experience

LLM for Social Intelligence, Arizona State University Spet 2025

We focus on the Theory of Mind in Large Language Models, which explores whether these AI systems can understand and attribute mental states like beliefs, desires, and intentions, similar to humans.

LLM for Feature Engineering, Arizona State University June 2025

We design an agentic system consisting of three specialized agents to unify feature transformation and feature selection to conduct automatic feature engineering for tabular datasets.

Environmental Protection Android App, University of Toronto Nov 2024

As Scrum Master for an Environmental Protection Android app in Android Studio, I led requirements and sprint planning to turn goals into a backlog aligned to team strengths. Built unit tests for Firebase registration and pie/bar dashboards comparing user scores over time and to regional averages, enabling personalized insights and cross-region benchmarks.

Student Identity Determination System, University of Toronto Sept 2024

I built a Java-based system to verify student identity in a school setting, designing algorithms to analyze and validate key factors such as student ID, enrollment status, and academic records. I managed development with GitHub—using version control, issues, and pull requests for collaboration and progress tracking—while strengthening my Java programming and data-validation skills and practicing project management within GitHub workflows.

English Word Guessing Game, University of Toronto Dec 2023

I designed and developed a Python-based vocabulary word-guessing game with a scoring system to reinforce learning. The game randomly selects words from a predefined list, tracks user performance, and includes a hint feature and persistent score tracking to improve engagement and user experience.
